Subject: Series ICL & ICS Cylinders Product Launch
To: Drive & Control Distributors

April 30, 2007

We are pleased to announce the launch of two cylinder lines - the Series ICL (ISO Clean Line), and the ICS (ISO Cylinder Stainless). Both of these cylinder lines help boost our industrial pneumatics offering, especially for food and packaging applications.

Both the Series ICL and ICS cylinder lines are hygienically designed and:

- Have an on-line configurator for designing a custom cylinder, plus provide a U.S. list price and a CAD drawing
- Are available in metric - or with NPT ports, inch strokes and UNF rod threads
- Feature standard adjustable cushioning (Ideal Cushioning design, including impact bumpers)
- Are in sales catalog SC-200.65 (and both will be in the next reprint of the SC-Master1 catalog)

The Series ICL meets ISO 15552 standards, and features a clean, anodized aluminum design to minimize potential pocket areas. It is designed for dust-off or light wash-down applications and comes in bore sizes 32 to 125mm.

The Series ICS cylinders meet ISO 6432 standards, and are available in either 316 or 304 stainless steel depending on application requirements. The ICS replaces our former Rextreme and Mecstreme cylinders. Designed with smooth surfaces and no cavities, the line is ideal for wash-down applications and comes in bore sizes 32 to 100mm.

Enclosed you will find the launch CD and catalog SC-200.65. Both the ICL and ICS are on the same CD, but appear in separate directories. The launch CD contains presentations for customers, technical information, sales guide and competitors. Also included are product images, catalog .pdf, pricing link, operating manual, trade show display info, and a press release.

The material class (discount code) for both Series ICL and ICS is B1 (35% discount).
